The screenshot shows the Oracle Technology Network page for "JDK 8u151 with NetBeans 8.2". The page has a red header with the Oracle logo and a navigation menu. A sidebar on the left lists various Oracle products, with "Database" and "Data Warehousing" circled in blue and numbered 2 and 3 respectively. The main content area features a title "JDK 8u151 with NetBeans 8.2" and a description. Below this is a license agreement section with a "2" in a blue circle pointing to the "Accept License Agreement" radio button. Further down is a table titled "Java SE and NetBeans Cobundle (JDK 8u151 and NB 8.2)" with columns for "Product / File Description", "File Size", and "Download". - Find the file you downloaded on your computer and click on it to install.

#### Note

you might need administrator rights to install software on your MAC!

Now that we have NetBeans installed, let's add the Codename One plugin.

## 2. Adding the plugin "Codename One" to NetBeans

Open NetBeans. In the menu, select Tools → Plugins.

In the windows opening, select “Available plugins”.

Plugins can be listed alphabetically by clicking on the column “name”, that makes them easier to find.

- Search for “Codename One”.
- Select the Codename One plugin by ticking the box on the left.
- Click on “Install” and follow the instructions.

## 3. Restart NetBeans to finish the installation

Congratulations, you are ready to create your first mobile app!
