Table of Contents

1. Installing NetBeans	1
2. Adding the plugin "Codename One" to NetBeans	2
3. Restart NetBeans to finish the installation.....	2
The end	2

1. Installing NetBeans

- Your MAC needs to run OS X 10.7 (Lion) or a more recent version. [Find out the OS X version of your MAC.](#)
- Go to <http://www.oracle.com/technetwork/articles/javase/jdk-netbeans-jsp-142931.html>
- Click on “Accept License Agreement”.
- Download the file “jdk-8u151-nb-8_2-macosx-x64.dmg” (see below)

The screenshot shows the Oracle Technology Network page for JDK 8u151 with NetBeans 8.2. The page has a red header with the Oracle logo, a menu icon, a search bar, and links for Sign In, Country/Region, and Call. The main content area is titled "JDK 8u151 with NetBeans 8.2" and includes a description of the distribution. A license agreement section is present with a "1" in a circle pointing to the "Accept License Agreement" radio button. Below this is a table of download links for various operating systems, with a "2" in a circle pointing to the "Mac OS X x64" row. The table lists the product/file description, file size, and download link. Below the table are links for the license, Java SE 8 Readme, NB 8.2 3rd Party Readme, installation instructions, Java SE release notes, and NetBeans release notes. At the bottom, there is a section for downloading the JDK 8u151 and NetBeans IDE 8.2 combined software package in Chinese, with links for the installation guide, Java SE release notes, and NetBeans release notes.

Figure 1. Downloading NetBeans for a MAC

- Find the file you downloaded on your computer and click on it to install.

Note

you might need administrator rights to install software on your MAC!

Now that we have NetBeans installed, let's add the Codename One plugin.

2. Adding the plugin "Codename One" to NetBeans

Open NetBeans. In the menu, select Tools → Plugins.

In the windows opening, select “Available plugins”.

Plugins can be listed alphabetically by clicking on the column “name”, that makes them easier to find.

- Search for “Codename One”.
- Select the Codename One plugin by ticking the box on the left.
- Click on “Install” and follow the instructions.

3. Restart NetBeans to finish the installation

Congratulations, you are ready to create your first mobile app!

The end
